

# Why Choose HPC Wall Safes?

## Wall Safes

HPC's Wall Safes provide for secure, secret storage of valuables in an office, home and institution. They are constructed of heavy-gauge steel with dual-reinforced steel locking and hinge points giving you the peace of mind knowing that your valuables are hidden and protected.

### HPC's Wall Safes are offered in 2 different sizes with 4 different locking options:

- High-security tubular cam lock supplied with 2 keys
- 4-wheel resettable combination lock with key override. User can reset combination when safe is open. Hotel/Locker mode is perfect for when temporary secure storage is needed.
- An exclusive lock assembly that allows you to add your own mortise cylinder. These Keyable Wall Safes make it possible to key the safe lock to an existing door or include it in a master keying system.
- HPC's exclusive MicroIQ™ Digital Locking series utilizes a proprietary electronic lock to provide a unique combination of convenience and security. The Digital Wall Safes has many intelligent features. There are 3 levels of access including the Master Code, Supervisor Code and User Code. Any of these codes can be instantly reprogrammed. Each level can set, change or delete the lower levels. When temporary secure storage is needed, this safe can be set to Hotel/Locker mode.

All HPC Wall Safes feature a true flush face for mounting with the hinge and lock below the surface. This allows a picture or mirror to be hung over the safe to hide its location.

The safes are finished with a unique textured powder coat painting process in an attractive neutral sand color making them suitable to install in any location.

Tubular Lock with two keys

Resettable 4-wheel combination lock with key override

Mortise Cylinder Housing accepts most 1" mortise cylinders. Larger cylinders can be used with spacer. Cylinders and spacers not included.

Digital Lock with three levels of security.
